jQuery, jQuery UI, Laravel,
DcatAdmin

Databases:

RESTful API, MySQL, MongoDB,
Firebase

Languages:

HTML5, CSS3, SCSS, JavaScript,
TypeScript, Node.js, PHP

Version Management:

Git

PROFILE

Ever since I first printed "Hello World" on the console, I knew I was fascinated by Web development. But my career in Web development was never just a job. It was always an opportunity to learn and improve my skills. Since I started programming, I have grown from a simple "Hello World" to a full-fledged developer. Over time, only more and more excitement will come.

PROFESSIONAL SKILLS

- Translated designs and wireframes into high-quality code.
- Quickly adapted to new technology and applying it in practice.
- Familiar with HTML5 and CSS3, including flexible layout and media queries for responsive and adaptive layouts.
- Proficient in JavaScript, including understanding of scope, closures, constructors, event delegates, asynchronous loading, etc.
- Experienced in using front-end development frameworks such as jQuery, Bootstrap, etc. for front-end project development.
- Proficient in React component development, including the use of hooks, and experienced in using the React-redux state management tool.
- Experienced in single page application development using Vue.
- Proficient in node.js and MongoDB and able to perform simple data interaction with the front end.
- Experienced in using git for collaborative development, including branch management, version management, and understanding of front-end code specifications and code formatting.

PROFESSIONAL EXPERIENCE

FRONTEND DEVELOPER

WEIVEE | September 2022 - Present | Contract

- Collaborated with the backend team to decide the API scope.
- Built reusable Vue and React components for future use.
- Worked with the project manager and development team to develop technical specifications.
- Managed code through git and regularly conducted code reviews on team member code to improve overall team code quality.
- Unified style, reduced server requests, and improved application performance. Minimized the number of customer operations and presented data more intuitively to users.

PROJECTS

Unidiy

September-Present 2022

/Mobile / React / Vue2 / uni-app / Vuex / UviewWui / Laravel/ PIXI.js/ MUI

We chat base E-Commercial applet.

- Implemented User Interface with Vue2 and UviewWui.
- Embedded commodity DIY function developed with next.js on mobile applet.
- Built reusable and modular components following development best practices.
- Built REST APIs and backend management system by using Laravel.

One Book (shorturl.at/deuw0)

Jun-August 2022

/Web / React/ Typescript / SCSS / Redux

Online Chinese Fiction wen application.

- Built frontend for web application displaying JSON input from API using React.ts.
- Fetched API data using Axios HTTP requests.
- Used CSS in JS to create scoped styles and reusable components.
- Reduced app code amount by 20% using the Redux hook.

Miley's Portfolio (shorturl.at/cehi6)

January-March 2022

/Web / React / JavaScript / Email.js / CSS3

A portfolio website that displays the owner's portfolios.

- Communicated with client to determine website's design.
- Completed front-end and UX/UI duties, implemented simple UX/UI with minimal screen elements.
- Used email.js to handle form submission allowing viewers can contact owner directly.
- Navigate each portfolio listed on website using React router.

Course Register (shorturl.at/dgkVX)

April-May 2022

/Web / React/ Express/ Bootstrap/ JWT

Full-stack project for obtaining and posting courses.

- Implemented client-side with React.js to accept user data and send it to the backend.
- Used Express.js to manage users' data and store it in MongoDB.
- Validated input data to prevent malformed input and enhanced data aggregation performance by 60%.
- Validated user's login input with Joi validation and encrypted user information with JWT upon receiving login request.

Welcome to Venezuela (<https://kaminopapa.github.io/>)

Jun-July 2020

/Web / HTML5/ CSS3 / Vanilla JavaScript

Pure HTML5, SCSS and JavaScript Project

- Embedded Google Map to help users find location of the country.
 - Implemented responsive design for cross-browser compatibility.
 - Used jQuery to manipulate HTML elements.
-
