PROFESSIONAL EXPERIENCE

FRONTEND DEVELOPER

September 2022 - Present | Contract

尼古拉网络科技有限公司 (Nicola Network Technology Co Ltd) - Shenzhen, China

- Achieved standardized front-end-back-end communication through API scope determination, by collaborating with the backend team.
- Created reusable Vue and React components, and demonstrated their future use, by designing and developing them with reusability in mind.
- Collaborated with the project manager and dev team to establish technical specifications and ensure project success.
- Improved code quality using git and, regular code reviews.
- Followed documentation of all involved technologies to always remain up-to-speed on what needed to be updated in response to new release versions.

PROJECTS

Design A

September-Present 2022

An e-commerce plug-in for WeChat with robust features for customized phone cases.

/Mobile / React / Vue2 / uni-app / Vuex / UviewWui / Laravel/ PIXI.js/ MUI

Users can customize product appearance by dragging and dropping elements such as text, images and uploading local images. The platform can distinguish between tourists and existing customers, displaying relevant information for logged-in and non-logged-in users.

One Book (shorturl.at/deuw0)

Jun-August 2022

An e-book web application built with React and TypeScript.

/Web / React/ Typescript / SCSS / Redux

The main feature is to fetch and display the latest and most popular Chinese novels from free API. Users can also bookmark their favorite books, search for specific novels, and adjust the text size and brightness of pages. The application also features a smooth and interactive loading animation to enhance the user waiting experience.

Miley's Portfolio (shorturl.at/cehi6)

January-March 2022

A personal portfolio website built with ReactJS featuring fully responsive design.

/Web / React / JavaScript / Email.js / CSS3

It includes the email.js library for visitors to send messages to the webpage owner. Navigation between pages is made possible with the react-router, and each page jump is set to bring the user to the top of the page to enhance user browsing experience.

Course Register (shorturl.at/dgkVX)

April-May 2022

A full-stack project offering online courses for teachers and students.

/Web / React/ Express/ Bootstrap/ JWT

The project implements role-based access control and displays relevant information for teachers and students. Login information is secured with JWT encryption and authentication to enhance security.

Welcome to Venezuela (https://kaminopapa.github.io/)

Jun-July 2020

A travel interface about Venezuela.

/Web / HTML5/ CSS3 / Vanilla JavaScript

Its main purpose is to present information on local tourist attractions, including cultural landmarks and tourist feedback. It also integrates Google Maps to showcase the geographical location of the country.
